

Eduardo Browne - Executive Vice President

Eduardo has been involved in providing technology solutions to the critical infrastructure market for over 20 years as well as deploying Clean Power Technologies since 1997. Prior to joining PMC he established and managed several technology companies with a strong focus on strategic partnerships and key relationships with several fortune 50 companies.

He contributed to develop, promote and execute a commercial distributed power generation business that successfully deployed the first ever Stationary Power Fuel cell projects into South America. He successfully started two information technology enterprises, leading business development including building solutions for corporate and government clients.

He leads PMC efforts on developing technology solutions and services for the critical infrastructure protection sector and Energy Security both in the US as well as abroad.

He is an engineer and holds degrees from the State University of New York College of Environmental Science and Forestry and Syracuse University.

He is a current board member of LIFT (Long Island Forum for Technology), and a member of the REIL/Yale Network round table focused on Climate Change.
